

MERCURY

Remanufacturing

GENUINEINGENUITY™

Welcome to Mercury Remanufacturing

We are an organization of hard working men and women from locations across North America. We strive continuously to improve our products and process's to ensure complete satisfaction from our dealership partners to boat-owners across the world.

Thousands of boat owners enjoy the use of their Mercury Remanufactured engines longer than any other engine brand in the marine industry. With the added benefit of an Original Equipment factory warranty, plus an available extended coverage contract from Mercury Product Protection, we are pleased to provide our customers with the finest marine assemblies anywhere. In short, we are truly dedicated to keeping all boaters on the water - running stronger and longer - year after year.

the parts...

Many parts used by local engine re-builders just don't hold up to the demands of a marine engine. Mercury Remanufacturing uses only marine-proven parts in our engines. Teflon-coated, high-silicon pistons, stainless valves, premium-grade bearings and rings, marine-grade gaskets and all-new head, rod and main bolts, are just some of the lengths we'll go to give you a durable end product.

the process...

We thoroughly inspect all cores. All of our blocks are disassembled, sonic-cleaned or oven-baked to remove debris, hot pressure-washed and reinspected - any damaged parts are scrapped - never welded or repaired. Each block is bored to a max .040 over (max .030 or re-sleeved on outboards), the deck is honed and the crank mains are line-honed. Cylinder heads are machined for flatness. Valve guides are machined to accept oversized stems and crankshafts are ground and polished to a max .020 undersize. All connecting rod pin and bearing bores are honed. Assembly with programmed torque-spec air tools insure even and consistent installation. After completion, all engines are hot-tested and evaluated before ever leaving the facility.

the protection...

All of our remanufactured parts and assemblies carry a One-Year Factory Warranty, which includes parts and labor. Mercury Product Protection can provide an addition Two Years of factory-backed coverage for powerheads, longblocks and serialized Certified Pre-Owned products.

the pursuit...

Mercury Remanufacturing is continually monitoring it's inventory of cores. With our nation-wide dealer network, we are able to acquire specific engine blocks and powerheads as needed. We offer generous bounties for all used engines that meet our specifications.
